

GET YOUR HOME REPIPED.

Professionally.

Turnkey repipe solutions

Efficient execution

Outstanding customer service

OC REPIPES

Solving pipe problems is what we do.

For hot and cold domestic water piping systems, common problems are low water pressure, discolored water, and leaks ranging from small pinholes to large ruptures. We provide a variety of replacement pipe options to meet our clients' specific needs.

Founded in 2014, OC REPIPES is the fastest-growing repiping company in Southern California. We solve complex age-related and defective domestic piping problems across a variety of property types. Our turnkey pipe-replacement solutions combine great planing, efficient execution and outstanding customer service into a single, finished product.

Our approach ensures we deliver on time and within budget, while providing a great level of care, attention to detail, and project management. And to have minimal disruption for residents, we guarantee to restore domestic water service at the end of each work day. Best of all, from start to finish each unit takes as little as 4 days, patching and painting included.

Properties we work on.

Apartments. During large renovation projects, resident retention and satisfaction is the biggest concern of property managers and multi-family investors. That's why we develop a custom communications plan, that ensures residents feel heard, included and respected throughout the repipe.

Condominiums. For condominium owners, pipe replacement is an investment in their home. We understand the importance of setting clear expectations from the beginning, so communities can make informed investment decisions. Excellent planning and completing each job with minimal disruption, are the core values of all our repipe solutions.

Hotels and offices. It's not easy keeping your business open while a major construction project is undergoing. That's why we adapt our workflows so you can get your job done, while we do ours. Our precision estimating and planning keeps the project timeline manageable and the disruption minimal, so you can get back to business.

Turnkey solution.

One contract, complete satisfaction. We bring all the necessary skills to complete the project under one contract. With a single point of accountability and reduced overhead, we deliver value on every job.

Our process takes care of everything- evaluation, estimating and budgeting, repiping, patching and painting. Our project managers, plumbers, drywallers and painters work together to expedite completion of the repipe.

Our repipe process.

1. Staging area is established. For most projects, a small shipping container is sufficient to store all necessary tools and materials. When space constraints are present, an offsite storage area is utilized.

2. Residents' homes are protected. Dust mitigation system is put in place to protect flooring, resident's valuables and furniture.

3. Drywall is cut and labeled. We use HEPA-certified vacuum and special drywall cutting tools to minimize dust by up to 99%. Messy drywall removal is a thing of the past. Each piece is labeled, so it can be returned where it belongs.

4. Old pipes are disconnected and replaced. Our precision drywall cuts allow our crews to efficiently access and replace the old pipes with new ones. Quick completion with minimal destruction and high quality workmanship is the goal.

5. Work areas are cleaned daily. All work areas are neatly organized and cleaned, and water service is restored at the end of each work day.

6. City inspections are passed. We work with the local jurisdiction to plan and schedule inspections, minimizing delays.

7. Drywall is installed and finished. Seamless drywall patching is the standard. All walls and ceiling used to access the pipes are restored to their original state.

8. Paint matching. All paints are custom color matched, so you can't even tell we have been there.

9. Final inspections. A final walkthrough with the homeowner or the property manager ensures 100% satisfaction.

Planning efficiently.

Before our crews break out their tools, we work with our clients to develop a comprehensive project scope. When necessary we can suggest resources who can help with failure analysis, engineering support, construction management, and other tasks.

Our proposals outline what's included in our scope of work and what's not. We encourage thorough discussion prior to starting the project to clarify the scope of work and minimize change orders. Staying within budget, without compromising on quality, is our philosophy.

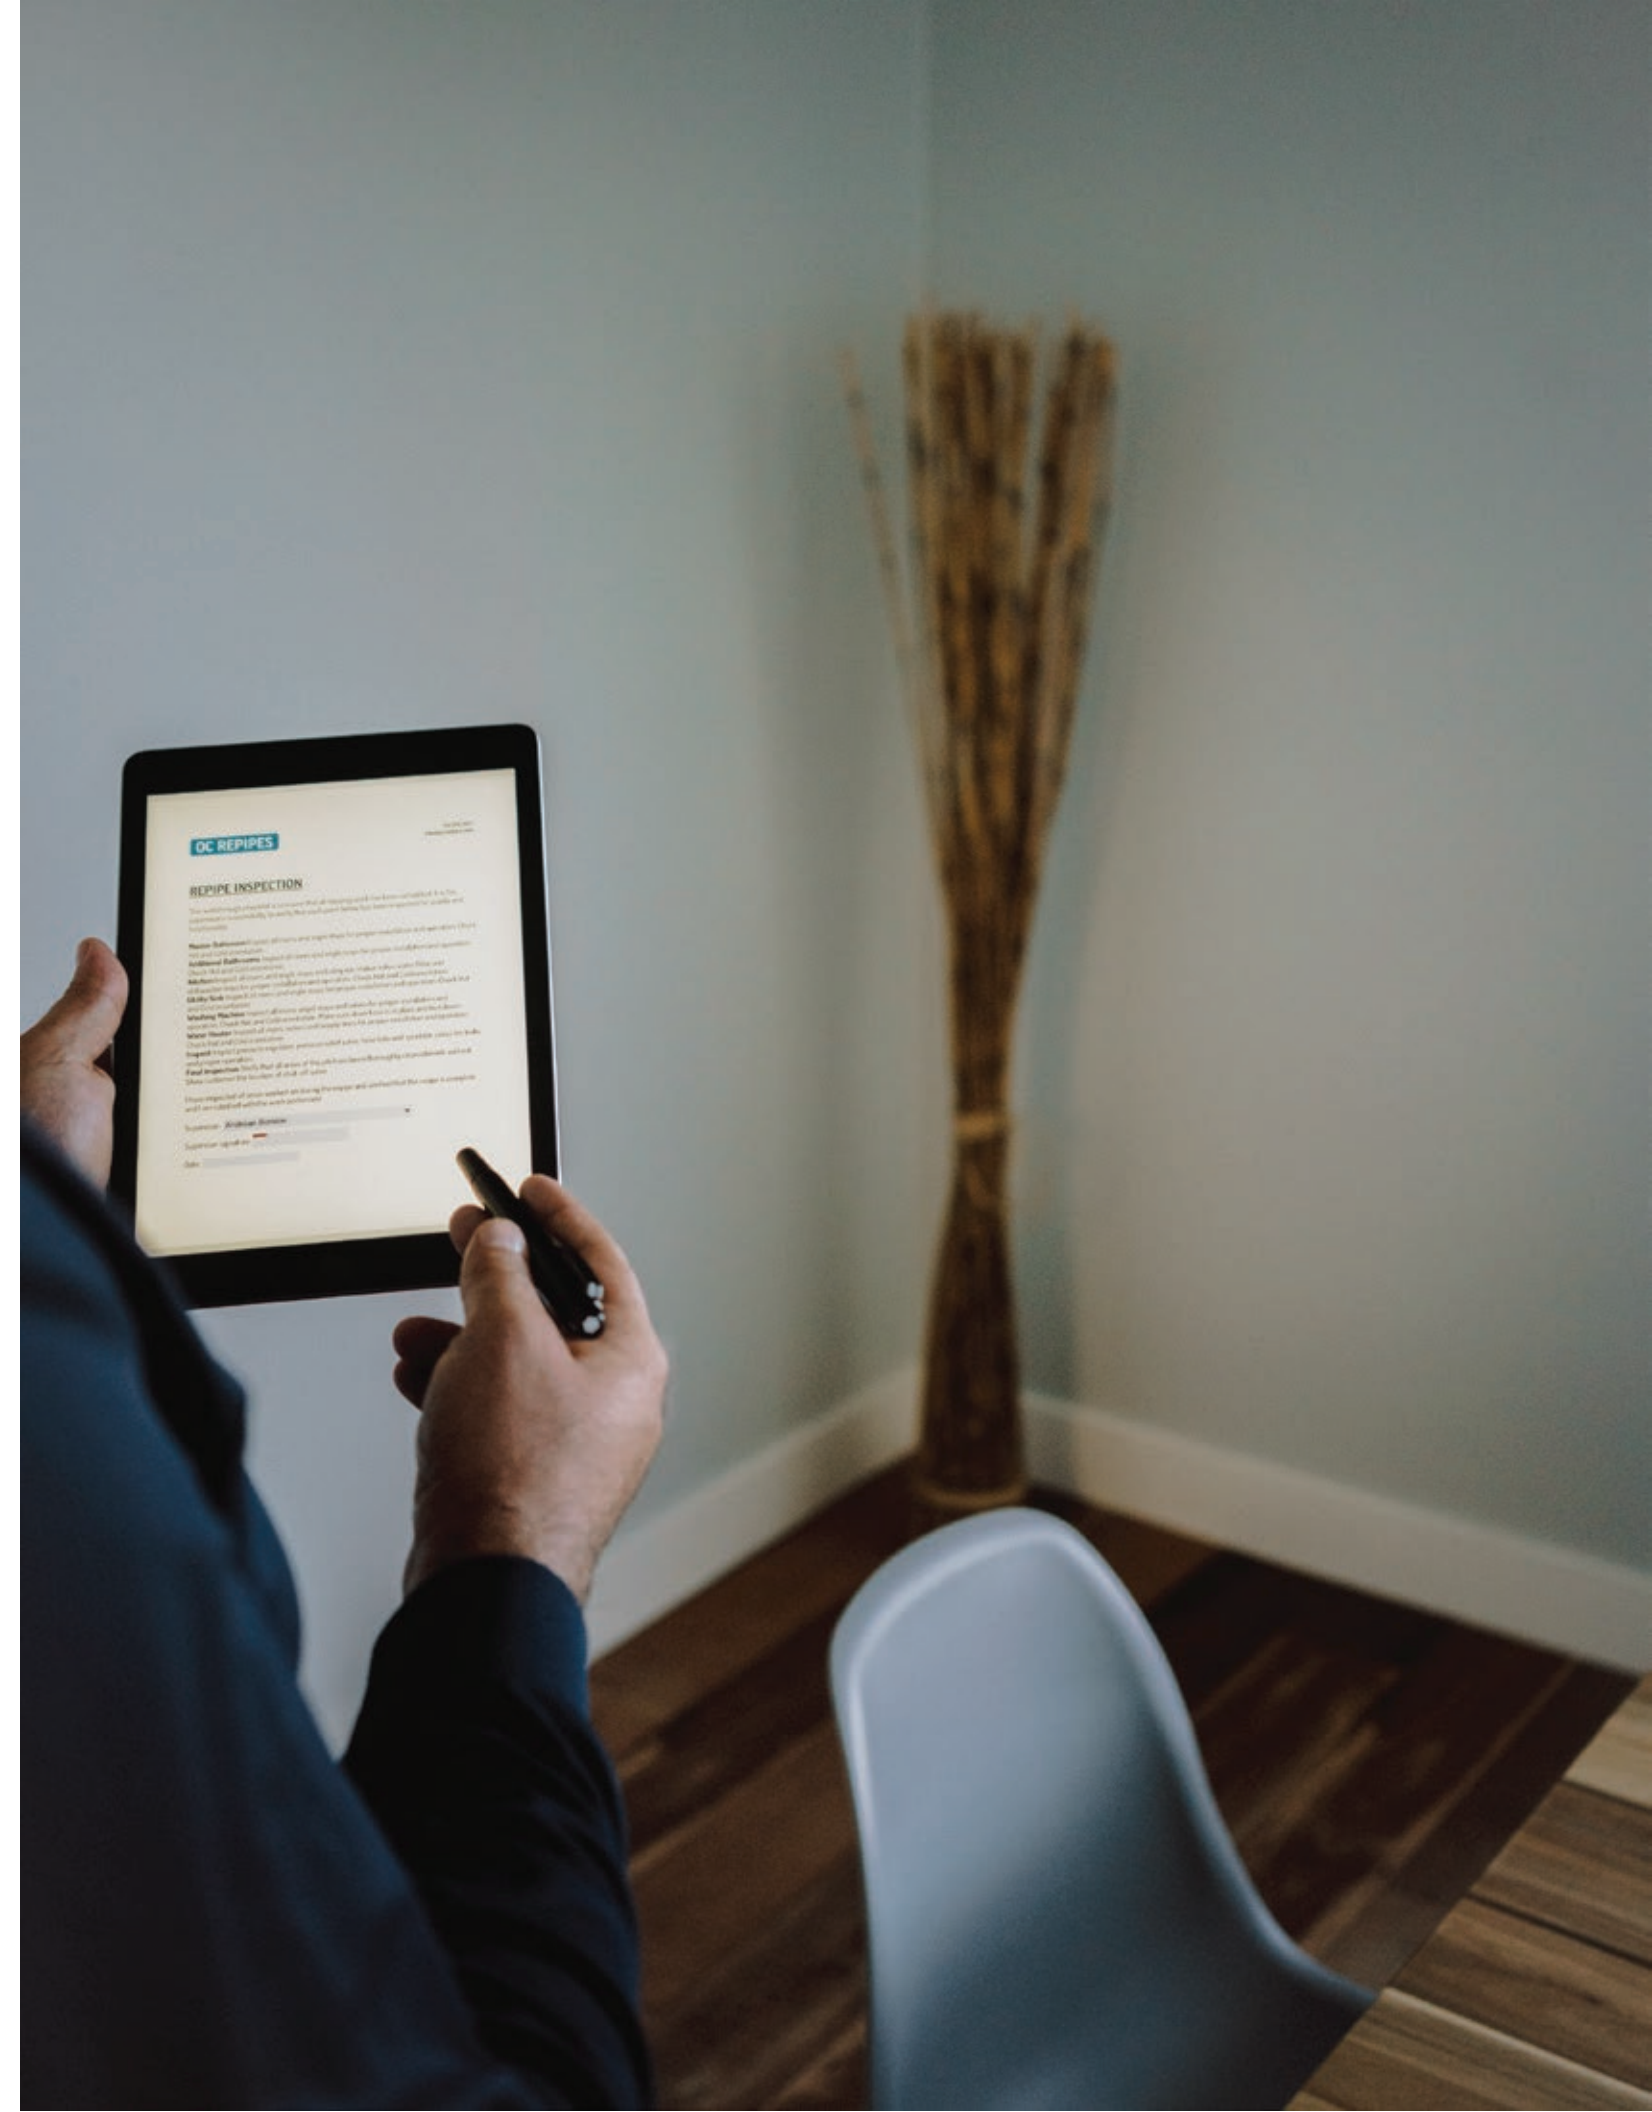

We build our bids around creating a functional, long-lasting solution for our clients. We consider a wide range of materials, workflows, and installation techniques to deliver a cost-effective [solution](#).

Communicating the **smart** way.

We create a custom communications package for every project. By using 21-century technologies, we greatly reduce our paper use. We have digitized all of our forms, making it easy for us and our clients. At the end of the project, we deliver a repipe report document for each unit. It contains everything from the pre-construction walkthrough and certificate of completion to the final inspection by the building inspector.

Throughout the repipe project, resident can communicate directly with our on-site project manager, limiting phone calls to your building staff.

Leaks happen. Anytime.

Flood remediation is expensive. Don't wait for the catastrophe to happen. Reach out to us today, so we can start planning. We offer free consultation for any pipe replacement project. Talk with one of our repipe experts to better understand your options.
